| 13 | Feed in Tariffs Renewable Heat Incentive Rates | Revised March 2019 |
|----|---|-----------------------|

The Feed in Tariff scheme has ceased

The Domestic Renewable Heat Incentive (Domestic RHI) is a government financial incentive to promote the use of renewable heat. Switching to heating systems that use eligible energy sources can help the UK reduce its carbon emissions and meet its renewable energy targets.

Depending on the heat output of the renewable heating system, a quarterly payment is made over a period of seven years. This goes a long way towards the cost of the heating installation. The current Domestic Renewable Heat Incentive Scheme (RHI) will be ending in March 2022 and it is proposed to replace it with a one off upfront grant of up to £4,000.
